Now available: a Ø22 mm 316L piezo switch with illuminated ring

APEM has extended its PBA series with a new Ø22 mm piezo switch. This new version has an illuminated blue ring and uses a 316L stainless steel case.

APEM developed this product for SPA applications. The customer chose a piezo switch because of its IP68 sealing. The piezo switch function is to turn on/off the SPA ; and the

blue ring reminds one of the color of the sea in sunny weather.

To meet the customer's specifications, APEM com

combined the existing Ø22 mm piezo switch bushing with the Ø16 mm current ring and actuator.

We chose a 316L stainless steel material to resist to the chemical agents added to the water (Brome and Chlore in particular). Thanks to this customer project, APEM is now able to offer illuminated piezo switches in stainless steel.

This new switch can be sold as a standard product.
